***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1-9 are rejected under 35 U.S.C. 102(e) as being anticipated by Funakoshi (6,757,485).

Funakoshi discloses a reproducing apparatus that shows all the limitations recited in claims 1, and 7, including the feature of reproducing video data from a recording medium (See Funakoshi's column 7, lines 20-26), and the feature of outputting I-picture and P-pictures as still picture based on the reproduced video data as specified in the present claim 1. (See Funakoshi's column 7, lines 27-36, where it is disclosed the capability of reproducing I-picture as the still picture and the capability of reproducing P-pictures as the still picture).

With regard to claims 2, 5, and 8, the feature of outputting P-pictures that represent the same picture as the I-picture as specified thereof is inherently present in Funakoshi. Because, as shown in Funakoshi's apparatus, the I and the P pictures are closely related to the same B-picture as disclosed in Funakoshi. Therefore, the I and P-pictures are similar between themselves. (See Funakoshi's Figure 2, and column 5, lines 37-55).

With regard to claims 3, 6, and 9, the feature of the P-pictures being greater than 1 as specified thereof is present in Funakoshi. (See Funakoshi's Figure 2, where it is shown more than 1 P-pictures).

With regard to claim 4, the feature of decoding I-picture and P-picture for the display of the still picture would be present in Funakoshi. (See the decoding means shown in Funakoshi's Figure 1, and the corresponding disclosure).

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claim 10 is rejected under 35 U.S.C. 102(e) as being anticipated by Juri et al (P.N. 5,999,693).

Juri et al discloses a video recording/reproducing apparatus which shows the same limitations recited in claim 10, including the feature of the navigation data for reproducing the data stream and the navigation data indicating if the data stream includes a still picture as specified in the present claim 10. (See the still picture flag shown in Juri et al's Figure 1b).

### ***Conclusion***
